Ticketing (SOP)

Commercial team ticketing:
If a Commercial/Client Success team member needs to open a support ticket on behalf of the customer, it must be opened in ZenDesk to ensure proper triage and handling per the below defined SLAs. See: Client Services Ticketing - Best Practices Implementation tickets (any ticket for new product or new product issue associated with an Implementation that has not moved out of UAT) can be opened in Jira directly (MS project) by the IMP team.

Support and Development team ticketing:	
Project:	**Meta Support (MS) - All Support and Implementation Issues** ~~**Implementation - define what tickets go into this project**~~ **(NO NEW IMP TICKETS)** **Development (DST) - bugs that require development, new development, API integrations, Enhancements, Improvements** **Reporting Service Team (RS) - Reporting tasks that don't need formal release**
Issue Type:	**Epic** - A gathering point for ideas, the "big picture" of a specific project. Will be broken down to smaller stories or tasks. **Story** - Represents a small, discrete piece of functionality or a user need. Focuses on delivering a specific, valuable piece of functionality - typically written from the product user POV. **Task** - Work that needs to be done, can be part of Epic, Story, or standalone. **Sub-task** - work item created by or needed for Task. **Bug** -(break/fix) problem which impairs or prevents functions of the product.
Summary:	Customer Short Code - Module Category - Meta Data *(do not insert urgency in ticket summary)*

Description:	**Business Use Case:** Brief Summary of the situation and ask. Use as much detail as possible: • Define the request. • *What* is the purpose of the request? What problem are we solving for? Highlight the consequences of not addressing the problem or leveraging the opportunity. • *Who* is impacted: all customers, specific customer, customers w/ certain settings? (if full scope of impact is unknown - keep as question for htt ps://cgmjira.atlassian.net/wiki/spaces/BCQ/pages/4073127937/Support +IMP+Ticket+Review+Agenda?atlOrigin=eyJpIjoiNWEzMzAxNDY4ZjI2 NDQ0ZGE2M2JiNzQ1MTI0MWFlYmQiLCJwIjoiYyJ9) • Is there a target due date? (hard launch date from 3rd party?) **Functionality Overview:** (technical scope added by triaging resource)
Priority:	Medium for all when creating, priority will be adjusted by management after initial triage. Urgent requests from the Client Services team should be discussed during Client Services-Ops Wednesday Agenda - See below SLAs for priority setting.
Ticket Linking:	Relates to - Follow up edits/iterations should be linked to original ask Blocked by - the ticket can't be worked until blocked by ticket is addressed (any others useful linking statuses)
Labels:	Source-Based Labels: • ADACompliance • Administrator and/or Permissions (permissions centered requests) • API-Web Services (for third-party or API-related issues) • AutoUpdate (issues resulting from or impacted by auto update function) • CIP (CIP Codes) • ConfigKickback (for issue created by or as a result of other task) • ConfigKickbackDST (for issue created by, or as a result of, support configuration that now requires DST) • Configuration (defined in SLA chart, below) • ConfigFeatureRequest (defined in SLA chart, below) • CSS (styling task) • DataImport

	• Enhancement (DST board - new functionality) • Feature_Request (ask that can't be handled by existing configuration) • Implementation (onboarding of new module or category) • Notifications • OL (Ordered List) • Paid_Project (request for dev, not included in scope, requires SOW) • ProcessImprovement (improvement to current functionality) • Production • Reporting • SystemPerformance (for performance-related problems) • Test • tshirtestimateneeded (dev estimate needed for SOW) • Units_Hours • V2DataExtract
Parent:	Parent Epic
Institution (existing)**:**	Short Code should always be used
Version (new)**:**	Version (Maverick, Meta (V3), V2)
Module (new)**:**	API - Webservices, Assessment, C&P, Catalog, Courses, Course Block Library, Packages, Policy, Program Mapper, Program Review, Programs, SSO, Syllabus.
Category (new)**:**	Admin/Users, Course Blocks, Cross Listings, Lookup Manager, Organization, Proposal Types, Proposals, Reports, Search, Tab, Workflows.
Ticket Status:	1. Open/Backlog Phase • New – Ticket is created but not yet triaged. • Reopened – was closed, now reopened • Waiting for Customer – More information is needed from the customer. 2. Development Phase • To Do – Ready for development but not started. • In Progress – Actively being worked on by the database/dev team. • Code Review – Code or database changes are under peer review.

	• Testing/QA – Being tested to ensure the issue is resolved. • Blocked – Waiting on another issue (DST), resource, or approval. 3. Resolution Phase • Resolved – Fix is completed and verified by the team. • Released – Fix is deployed to production. • Closed – Ticket is confirmed as resolved with no further action needed. 4. Non-Development Resolutions • Duplicate – Issue already exists in another ticket. • Won't Fix – Decision made not to address the issue. • Cannot Reproduce – Issue could not be replicated. • Deferred – Issue postponed for a future release. Status Closed-Resolutions: Closed - Fixed Closed - Done Closed - Won't Do Closed - Duplicate Closed - Cannot Reproduce Closed - Not a Bug
Workflow	Current xml export out of current MS board Meta Support Workflow.xml

Ticket Priority	Priority Definition	SLAs
Ticket Triaging: within 5 business days (want to get down to same day triaging), the issue will be triaged. Triaging = completion of the ticket description per the above, assigning ticket priority, steps to recreate issue (if applicable). Timelines below begin after triage period.		
Critical (Standard Support)	-System production outages -System connection errors -Major security vulnerabilities -Issue that significantly blocks Customer's ability to access product -Error 500/Internal Server Errors	1-2 business days* (no contractual obligation for up time)

High (Standard Support)	-Error or break-fix bug for a specific product function and no workaround is available. -UI and/or public facing bugs -Long load times or timeouts -Session expiration (bug=functionality not working as intended)	(within) 1-5 business days*

Medium (Standard Support)	Commercially necessary configuration updates (**Configuration**):
	• Form updates
	  ◦ add or edit if field is “required”
	  ◦ field name changes
	  ◦ add/remove fields
	  ◦ edit or fix of calculated fields to align w/ new CA requirements
	  ◦ versioning
	  ◦ tab updates
	• Reporting (that does not require DST)
	• Course outlines
	• Lookup data
	• Catalog output updates
	• Form corrections (roll back of changes)
	• merging/moving field data
	• conditional step configuration - workflows
	• show/hide edits
	
	Configuration errors or break-fix for specific product function and a workaround is available.
		within 30 days*

Custom Support - Complex Configuration	-configuration updates that will take 5-16 hours **(ConfigFeatureRequest)** • new Proposal types • Proposal cloning • Proposal reactivation • new Agenda report	30-60 Days**

	• new calculated fields • new custom validation • new show/hide • Course block libraries (new and updates) • Auto updates	

Custom Support - Enhanced Service Engagements	The below list of requests will be processed as paid projects. **These will require estimate and signed SOW before scheduling**:
	• data imports
	• bulk updates (dates, course numbering, any other information from a spreadsheet to be changed in UI)
	• new Custom report
	• new Comparison report
	• new Impact report
	• new functionality that can't be supported by configuration (new settings, system enhancements)
	• API integrations (ALL new or changes to Acadea and/or Vendor connections)
	• module revamps (module configuration updates that require more than 16 hours* of configuration)
	  ◦ *General support 0-16 hours of configuration (no charge)*
	  ◦ Level 1 17-40 hours of configuration ($2,500)
	  ◦ Level 2 41-80 hours of configuration ($5,000)
	  ◦ Level 3 81-125 hours of configuration ($10,000)
	  ◦ 125+ hours will be determined on an ICB
	• New implementations **(Implementation)**
		Per signed SOW or New/Updated Contract terms
		Module revamps:
		for Fall semester delivery, 4/15 cut off date for complete requirements
		for Spring semester delivery, 9/15 cut off date for complete requirements

	**If customer submits more than 3 configuration update requests for same module in rolling 4 week period - (and we feel that these are more of an attempt to revamp the module) Ops will alert CS team.*	
Low	Delivery date requested 90+ days out • CSS - styling updates • logo updates	ICB

*if development (DST) required, TBD on an ICB.
**from receipt of completed onboarding template or project requirements.

Ticket Processing: SLA Tickets will be handled in order of Ticket Priority, then by date received. See SLA for target processing times.

If request is made that requires new development (paidproject (MS), feature_request (DST) - SOW expires after 90 days and ticket will be closed when SOW expires. If on roadmap or we decide to process as system enhancement, defer MS ticket and link to DST ticket.

UAT:

Acadea will allow 30 days for UAT. If request sits in UAT for more than 30 days Customer will be notified prior to ticket closure. Subsequent support needed on request that has been in UAT for more than 30 days is subject to new SLA timeline.

Ticket closure:
If additional information is required to recreate issue described in support ticket or confirm any details (to include customer affirmation of approach and possible impact of changes:

- 1st request sent to customer upon triage
- 2nd request sent 1-2 weeks later
- ticket closure 30 days from last outreach
